SUMMARY

Software Engineer and final-year Computer Science undergraduate (CGPA 8.7/10) currently interning at PayPal, with experience building and shipping production web applications – including a live job platform serving 500+ daily users. Strong in the MERN stack, Java, REST APIs, and system design fundamentals, with 1000+ DSA problems solved.

EDUCATION

Bachelor of Technology, Birla Institute of Technology (BIT), Mesra 2023 - 2027
Computer Science and Engineering CGPA: 8.7/10

TECHNICAL SKILLS

Languages	C++, Java, JavaScript, TypeScript, Python, C, SQL
Frontend	React.js, Next.js, Redux, Zustand, Tailwind CSS, Bootstrap, Chakra UI, Framer Motion, HTML5, CSS3
Backend	Node.js, Express.js, Spring Boot, MongoDB, Mongoose, PostgreSQL, MySQL, Redis, Firebase, REST APIs, JWT, Socket.io (WebSockets), Google OAuth, Razorpay API
Cloud & DevOps	AWS (EKS, EC2, S3, Lambda), Kubernetes, Docker, TeamCity, Octopus Deploy, Artifactory, CI/CD, Splunk, Datadog, Linux/Bash
Testing & Fundamentals	Cucumber (BDD), TestNG, RestAssured, Feign, JUnit, Apache Fineract; DSA, OOP, DBMS, OS, Computer Networks, System Design, Microservices
Tools & AI	Git, GitHub, Jira, Postman, Webpack, Vite, Vercel, Render, WordPress, Canva; Groq (LLaMA 3), Gemini API, Claude Code, MCP

EXPERIENCE

Software Engineer (SWE) Intern May 2026 - Present
PayPal *Bangalore, India*

- Built a PR reviewer recommendation system for the Credit (Buy Now, Pay Later) team that auto-suggests suitable reviewers, streamlining code-review assignment across 23+ repositories.
- Migrated 40+ functional test scenarios from TestNG + RestAssured to Cucumber (BDD) with Feign clients, adding multi-tenant coverage across Apache Fineract services.
- Analyzed 25+ CI builds to pinpoint recurring failure windows and built JQL dashboards to triage and track live issues.
- Fixed CI failures caused by timezone mismatches across different tenants (UTC vs partner-product timezone), improving BDD test reliability across the BNPL platform.

React Developer Intern Jan 2026 - Present
NS Apps Innovation *Hybrid*

- Developed responsive user portals and administrative dashboards for Bihar government projects using React.js.
- Implemented complex form workflows with client-side and API-level validation to ensure reliable data submission.
- Collaborated with backend engineers to integrate REST APIs and align frontend-backend contracts across government platforms.

PROJECTS

FlexPass – Pay-Per-Use Microservices Marketplace June 2025
Tech Stack: React.js, Node.js, Express, MongoDB, Redis, Socket.io, JWT, Google OAuth, Razorpay, Groq AI Source Code | Live Demo

- Architected a pay-per-use marketplace with a unified wallet and Razorpay integration, supporting 5+ digital service types with time- and usage-based access control over a modular Node.js/Express backend.
- Implemented Redis-based distributed locking and rate limiting, eliminating race conditions in concurrent wallet transactions and cutting unauthorized auth attempts by 80%.
- Built JWT, Google OAuth 2.0, and Email OTP authentication with real-time usage tracking, reducing invalid session errors by 60% via post-payment pass-expiry logic.
- Engineered a real-time admin dashboard (Recharts) for revenue and system-health monitoring, a 5% automated cashback engine, a double-sided referral system, and live Socket.io support chat with Groq AI-powered service integrations.

JobGrid – AI-Powered Engineering Job Portal March 2026
Tech Stack: Next.js 15, Node.js, Express, MongoDB, Groq AI (Llama 3), Telegram Bot, Capacitor Source Code | Live Demo

- Built an AI-powered job portal for engineering roles (Next.js 15, Node.js) aggregating listings from 10+ sources via automated scrapers, a Telegram bot, and cron-scheduled ingestion.
- Integrated Groq (Llama 3) NLP to auto-parse job descriptions for tech stack, seniority, and metadata, powering smart filters (batch, role, job type) and AI-based job recommendations.
- Developed a real-time job-market analytics dashboard (Recharts), a community discussion forum, an admin moderation panel with spam reporting, and a cross-platform mobile app (Capacitor) with push notifications, serving 500+ daily users across web and mobile.

WhereIsMyBitBus May 2025
Tech Stack: React (Vite), JavaScript, Firebase, Chakra UI, OpenStreetMap Source Code | Live Demo

- Built a real-time bus tracking platform (React, JavaScript, Firebase) solving a campus commute problem, now serving 300+ users at BIT Mesra.
- Integrated OpenStreetMap API and Firebase Auth to enable 98% live location accuracy and secure access for 100+ daily users.
- Enabled 5-second real-time location updates by storing only current coordinates in Firebase, ensuring accurate bus tracking while optimizing database performance during high-traffic hours.

ACHIEVEMENTS

- Won **1st Prize** in Web Development at Technika'24 Hackathon, BIT Mesra.
- Secured **2nd Prize** out of 200+ teams in Innovate-A-Thon 3.0 (36-hour Web3 Hackathon) at BIT Mesra and received **$200** prize money sponsored by **Coinbase**.
- Placed in the **Top 5 Teams** in Web Development at Hackit'25 (48-hour Hackathon), Amity University.
- Qualified **twice** for the Internal College Round of Smart India Hackathon (SIH) among shortlisted institute teams.
- **Semifinalist** - TCS CodeVita Global Coding Competition.
- Solved **1000+ DSA problems** across platforms including LeetCode, Codeforces, CodeChef, and GeeksforGeeks.
